## Emergency Procedures Quick Reference Guide

### Earthquake

#### IN THE EVENT OF AN EARTHQUAKE:

- As soon as the shaking begins
  - DROP to the floor so that you are not knocked down
  - COVER your head to shield from any falling objects
  - HOLD ON where you are until the shaking stops and no debris is falling
- During the shaking, do not run for exits or attempt to leave the building, since heavy objects may be falling in your path
- If outside, move away from structures, power poles, or other hazards – stay in an open area
- When the shaking stops, check for injuries to people in the area and call for assistance
